JUDE WAKIM

Cloud Engineer

Orlando, FL | 305-302-3565 | judewakim@wakimworks.com | linkedin.com/in/jude-wakim | github.com/Judewakim | wakimworks.com/judewakim

SUMMARY

Cloud engineer building, deploying and operating production workloads on AWS since 2019. Designs serverless, multi-tenant systems with security built in from the start: least-privilege IAM, cross-account access, encryption, and infrastructure as code in CloudFormation, Terraform and AWS CDK. Background in managed-services IT supporting Microsoft 365, Entra ID and endpoint security across 10+ client environments.

EXPERIENCE

IT Support Technician, MSP4 (Managed Services Provider) Miami, FL | Nov 2023 – Aug 2024

- Supported 10+ client tenants (about 200 users and 200+ endpoints) across law, non-profit, gas and CAD firms; closed 5–10 HaloPSA tickets a day by phone, remote session and on site.
- Ran identity lifecycle in Microsoft 365 and Entra ID: 5–10 onboarding and offboarding requests a week, license and group assignment, MFA and Conditional Access, and full access revocation on exit.
- Administered Windows Server 2016/2019 and on-prem Active Directory: Group Policy, file-share permissions, DHCP/DNS and print services; enrolled devices in Intune and managed Azure backups and access controls.
- Triaged CrowdStrike and Microsoft Defender alerts, isolated affected machines, and contained a phishing compromise end to end: header and SPF/DKIM/DMARC analysis, session revocation, password reset, MFA enforcement and blast-radius review.
- Wrote PowerShell scripts to keep Windows and third-party software current via NinjaOne; managed privileged access in BeyondTrust and credentials in Keeper; supported Fortinet firewalls and VPN.

PROJECTS

The Arsenal — multi-tenant SaaS platform for life insurance agents 2024 – Present

- Sole engineer of a production platform used by about 30 agent accounts: CRM, KPI tracking, calendar, underwriting research and SMS automation, handling regulated consumer financial and medical data.
- Built on AWS Amplify, Lambda, DynamoDB, Cognito and KMS with per-tenant isolation, identity-derived data access, envelope encryption and secrets in Secrets Manager; Twilio messaging and Stripe billing.
- Every change ships to staging behind CI and reaches production only after review.

SOC 2 Compliance Workbook — github.com/Judewakim/SOC2-Compliance-Workbook

- Python (boto3) checker that inspects an AWS account and fills a SOC 2 control workbook in Google Sheets with pass/fail results by domain; Terraform deploys a least-privilege, read-only IAM identity to run it.

AWS Security Stack — github.com/Judewakim/securitystack

- One-click CloudFormation security baseline enabling GuardDuty, Security Hub, CloudTrail and AWS Config with optional CIS and AWS Foundational conformance packs, single or multi-region.
- Encrypted, versioned log buckets with lifecycle rules; EventBridge and SNS alerting; Lambda functions for gap remediation and monthly findings reports; mapped to SOC 2 CC6.1/CC7.2 and ISO 27001.

S3 Sentry — github.com/Judewakim/s3-misconfig

- Multi-tenant S3 misconfiguration scanner in Python: a Docker-built Lambda container runs 14 Prowler checks daily across customer accounts via cross-account roles (ExternalId and PrincipalArn conditions), and maps failures to NIST CSF.
- Emails HMAC-signed, single-use Fix and Ignore links that snapshot settings to a vault before any change; public live demo lets visitors scan their own account through a read-only role, with rate limits and cost caps.

EDUCATION & CERTIFICATIONS

B.S., Information Technology — University of Central Florida, 2023

Post-graduate cloud programs: Great Learning (UT Austin), Level Up in Tech

CompTIA Security+ • CompTIA Network+ • AWS Certified Cloud Practitioner • Microsoft Azure Fundamentals (AZ-900)
