JUDE WAKIM

Cloud Engineer
Orlando, FL | 305-302-3565 | wakimworks.com/judewakim | github.com/Judewakim

SUMMARY

Cloud engineer building and operating production workloads on AWS since 2019. Builds and runs containerized and serverless systems with Terraform, AWS CDK and CI/CD, with security built in: least-privilege IAM, keyless OIDC deploys, encryption and network isolation. Monitors, troubleshoots and recovers production systems. Managed-services IT background in Microsoft 365, Entra ID and Azure.

SKILLS

AWS: VPC, ECS Fargate, ALB, RDS, Lambda, DynamoDB, S3, IAM, STS, KMS, Secrets Manager, ECR, CloudWatch, EventBridge, SNS, CloudTrail, Cognito, Amplify
Infrastructure as Code & DevOps: Terraform, AWS CDK, CloudFormation, Docker, GitHub Actions (OIDC), Checkov, Git
Languages & Scripting: Python (boto3, FastAPI), PowerShell, Bash, JavaScript, SQL
Microsoft & Endpoint: Microsoft 365, Entra ID, Intune, Active Directory, Windows Server, Azure
Security Tools: Prowler, CrowdStrike, Microsoft Defender, BeyondTrust, Keeper, Proofpoint, Fortinet

EXPERIENCE

Founder & Cloud Engineer, WakimWorks LLC Orlando, FL | 2024 – Present

- Build and operate The Arsenal, a multi-tenant SaaS for life insurance agents with 50+ agent accounts and regulated client data, on AWS Amplify, AppSync, Lambda, DynamoDB, Cognito and KMS.
- Ship weekly through a local → staging → production pipeline gated by GitHub Actions CI and manual review; CloudWatch alarms on API errors, throttling and KMS spikes alert to Slack.
- Protect data and cost with DynamoDB point-in-time recovery and deletion protection, per-tenant isolation with KMS encryption, WAF rate rules and reserved Lambda concurrency.
- Run VerifyAnAgent, which publishes license-verified profile pages for insurance agents linked to state records; 7 agents live.

IT Support Technician, MSP4 (Managed Services Provider) Miami, FL | Nov 2023 – Aug 2024

- Supported 10+ client tenants (about 200 users, 200+ endpoints) in law, non-profit, gas and CAD firms; closed 5–10 HaloPSA tickets a day.
- Ran identity lifecycle in Microsoft 365 and Entra ID: 5–10 onboarding and offboarding requests a week, MFA and Conditional Access, and full access revocation on exit.
- Administered Windows Server 2016/2019 and Active Directory (Group Policy, DHCP/DNS, file shares); enrolled devices in Intune and managed Azure backups and access.
- Triaged CrowdStrike and Defender alerts and contained a phishing compromise: header and SPF/DKIM/DMARC analysis, session revocation, MFA and blast-radius review.

PROJECTS

Terraform ECS Platform — github.com/Judewakim/terraform-ecs-platform

- Terraform-built ECS Fargate service behind an ALB in a three-tier, two-AZ VPC, with RDS Postgres in isolated subnets, KMS encryption and an RDS-rotated secret the app reads per connection.
- GitHub Actions deploys through OIDC with no stored keys, behind an approval gate and an IAM permissions boundary; 15 offline Terraform tests and Checkov run on every push.
- Debugged the first deploy through CloudTrail; ran an incident drill (security-group drift), detected by CloudWatch alarm in 5 minutes, repaired by Terraform, documented in a blameless postmortem.

AWS Waste Finder — github.com/Judewakim/CostOptimizationWithAWSLambda

- Serverless multi-region scanner (CDK, Lambda, API Gateway, DynamoDB) that finds idle NAT gateways, unattached volumes and unused IPs, prices each finding and attaches a fix; weekly EventBridge run with SNS summary.

S3 Sentry — github.com/Judewakim/s3-misconfig

- Lambda container image runs 14 Prowler checks across accounts through ExternalId-protected cross-account roles, maps failures to NIST CSF and emails signed single-use fix links.

EDUCATION & CERTIFICATIONS

B.S., Information Technology — University of Central Florida 2023
Post-graduate Program in Cloud Computing — UT Austin (Great Learning) Sep 2023 – May 2024
Cloud DevOps Engineering Program — Level Up in Tech Nov 2024 – Jul 2025
CompTIA Security+ • CompTIA Network+ • AWS Certified Cloud Practitioner • Microsoft Azure Fundamentals (AZ-900)
